

WHEN IT COMES TO YOUR *blood pressure*,  
DON'T MISS A BEAT.

Managing high blood pressure is vital. Learn how you can better your heart with simple changes to your lifestyle.

ARE  
YOU THE  
ONE?

## TAKE YOUR HEART TO **HEART.**

It's your most important organ. Still, one in three people suffer from high blood pressure, also known as hypertension.<sup>1</sup> Don't be that one in three. Take the right steps to monitor and manage your heart to decrease your risk of heart disease and *increase your life expectancy.*

## KNOWING THE NUMBERS.

When taking your blood pressure, it's always good to know exactly where you stand. But first things first:

*What do the numbers actually mean?*

**Systolic Pressure** is the top number. It represents the pressure as your heart contracts to pump blood to the body.

**Diastolic Pressure** is the bottom number. It represents the pressure between beats, when your heart relaxes.

## NORMAL

Below this level is considered normal.

## HYPERTENSION

When reaching these levels you are considered to have high blood pressure.

You can easily manage your blood pressure by monitoring at home, morning and night.

## HOME IS WHERE THE HEART IS.

It's surprising how often your numbers can change; that's why home monitoring is important. Did you know that blood pressure in the morning can be significantly different than at night, or when you visit a doctor's office?

By using an accurate monitor at home, you'll be able to detect and track the changes in your blood pressure.

This way you can make *the right lifestyle changes.*

**A BETTER HEART  
STARTS WITH A  
BETTER LIFESTYLE.**

## SMALL CHANGES, HUGE **REWARDS.**

Managing your high blood pressure doesn't have to take a lot of work. In fact, small improvements to your lifestyle can significantly better your heart. *Here's what you can do:*

### **Exercise**

Just be a little more active. Walk instead of drive, take the stairs instead of the elevator and count your steps to a healthier heart.

### **Eat smart**

Try to find low-fat, low-sodium substitutes that also taste great. Potassium found in bananas and carrots is nature's best medicine for your heart.

### **Kicking the habits**

Minimize your alcohol and cigarette intake. If you're going to have a drink try red wine, which, in moderation, is better for your heart.

### **Stifle your stress**

Stress is a normal part of life. But too much can increase the risk of heart disease. Relax by doing things you enjoy (yoga, gardening, walking, etc.) and your heart will benefit.

**MANAGING  
BLOOD  
PRESSURE IS  
WITHIN YOUR  
REACH.**

## LIVE WELL TO **LOVE** YOUR HEART.

Managing your blood pressure can be easy by following a healthy program you and your doctor have created. Make a pledge to start monitoring frequently and track your progress with the memory storage feature within your monitor or with the log sheet provided at the back of this brochure.
